PROFESSIONAL SUMMARY

Technical product lead with 10+ years shipping products that protect revenue, reliability, and adoption across B2B SaaS platforms, API ecosystems, and AI-powered products serving 1M+ users. I find the expensive problem hiding in the platform -- the one nobody named yet -- and ship the product that solves it. Three proof points: rebalanced a product from 90/10 feature/stability to 50/50, reversing a \$2M SLA penalty trend and winning Rakuten as a new customer through quality. Shipped a 0-to-1 fleet analytics product at YVR that cut idle time 50% and prevented \$500K in downtime. Drove 30% incremental revenue by simplifying API contracts for partner ecosystems. Engineering foundation (CS degree, 7 years SE/PE at Cisco and Mavenir). MBA (Tech & Analytics), UBC Sauder.

PROFESSIONAL EXPERIENCE

Vancouver Airport Authority (YVR)

Jun 2025 - Jan 2026

Product Manager -- Fleet Decision Support & Business Continuity Vancouver, Canada

- **Shipped a 0-to-1 product in a domain I'd never worked in.** Embedded with ground crews, shadowed shifts, found the real decision points -- then defined product vision, authored PRDs, and delivered in 7 months.
- **Cut idle time 50%, prevented ~\$500K in downtime.** KPIs defined before the first sprint. Discovery with 15+ operators (JTBD, persona mapping) meant the first draft became the stable build.
- Drove stakeholder alignment across ops, vendors, and executives with shared OKRs. No new headcount, no new systems -- just the product that turned existing data into decisions.

Mavenir Systems

Jan 2014 - Feb 2024

Product Manager / Product Owner -- T-Mobile Digits & DevEdge Seattle, USA (2019-2024)

- **Rebalanced product investment from 90/10 to 50/50 feature-to-stability** when SLA penalties were trending toward \$2M/quarter. Defended the decision to sales (who wanted features) and engineering (who thought I was adding process). Six months later, stability metrics hit targets -- and that quality track record won Rakuten as a new customer.
- **Drove ~30% incremental revenue** by identifying underserved enterprise/SMB segments, simplifying API contracts, and enabling self-serve partner integrations -- a product-led growth motion with zero added ops load.
- **Cut time-to-market 25% (12 to 9 weeks)** by owning the roadmap for an API-first platform serving 1M+ users, running sprint planning with RICE prioritization, and decoupling release dependencies.
- Negotiated API data-sharing contracts with Samsung, Apple, Amazon across 40+ device types. Ran A/B experiments (HEART metrics). Presented QBRs to C-suite. Owned API versioning and developer documentation.

Principal Engineer / Technical Product Lead -- Rakuten Link (2018-2021)

- **Achieved 99.99% uptime** scaling Kubernetes microservices to millions of sessions. Defined SLOs, managed performance-cost-operability trade-offs as the bridge between engineering and product.
- **Freed 30% engineering capacity** by building observability for API gateways. Cut integration failures 20% through API standards persisting 3+ years in production.

Software Engineer -- Telco Platform (2014-2018)

- Built API-based platform components (IMS Core, RCS, SIP) in production carrier environments. Established extensibility patterns used by partner integrations.

Software Engineer Bangalore, India

- Built real-time video streaming systems under hardware constraints (64MB RAM, 6-year lifecycle). Every software decision had to survive years without hardware redesign -- that constraint-thinking carries into every product decision I make today.

PROJECTS & PUBLICATIONS

AnomEdge -- Edge AI Fleet Diagnostics | 2nd Place, ProductBC Build-a-thon 2026

Three-tier AI inference (deep learning, ML, expert rules). Designed the confidence threshold cascade and fallback logic. Rust, <100ms p99, 145 tests.

CAMARA Sandbox -- Developer API Platform | Python/FastAPI

Open developer platform for carrier APIs. Cut developer onboarding from procurement agreements to 90 seconds. 3 API surfaces, 53 tests.

WeatherRAN -- AI Prediction Model | O-RAN xApp, Python

ML model for 5G radio optimization. 5.3% BER improvement, 332 tests. End-to-end: data sourcing, training, evaluation, deployment.

EDUCATION

MBA (Tech & Analytics) -- UBC Sauder School of Business

2024 - 2026

Certificate, Project Management -- University of Washington

2019 - 2020

B.Tech, Computer Science -- NIT Raipur, India

2006 - 2010

CERTIFICATIONS

CSPO | CSM | PMP | KCNA (Kubernetes & Cloud Native) | AWS Certified | Terraform Associate

CORE COMPETENCIES

Product Strategy: Product Vision & Roadmap | OKRs & KPIs | PRD / PRFAQ / BRD | Prioritization (RICE, ICE, MoSCoW) | Product-Led Growth (PLG) | 0-to-1 Product Launch | Product-Market Fit | Feature Flagging & Experimentation

Discovery & Growth: Customer Discovery | Jobs-to-Be-Done (JTBD) | User Research & Personas | A/B Testing | AAARRR Funnels | HEART Metrics | Cohort Analysis | NPS & CSAT | Go-to-Market (GTM) | Competitive Analysis | TAM/SAM/SOM

Technical: API Design (REST, GraphQL, OAuth, Webhooks, SDKs) | Developer Experience (DX) | AI/ML Products (LLMs, Edge AI, NLP) | Cloud-Native (AWS, Kubernetes, Terraform) | CI/CD | Microservices | Observability & SLO/SLA | SQL | Tableau/Looker

Delivery: Agile / Scrum / Kanban / SAgile | Sprint Planning & Backlog Grooming | Cross-Functional Leadership | Stakeholder & Executive Communication | Jira / Confluence / Figma | GDPR & SOC 2
